

Kent Beck presents Extreme Programming

Sunday, April 27 2003, 8:30 - Noon
Westin Crown Center
Kansas City, MO USA

Do you need help deciding whether your organization should seriously evaluate Extreme Programming (XP)? Join XP founder Kent Beck as he takes you through the philosophy and application of XP, helping you see where XP would have impact in both costs and benefits.

Consider attending if you are on a team facing vague and changing requirements and you need to gain more business value out of every development day.

In the first half of the session, Kent will illustrate by analogy with just-in-time manufacturing, ways to organically grow code and databases, especially once a product has been deployed.

In the second half of the session (Includes Question/Answer), Kent will discuss XP values of simplicity, communication, feedback, and courage and how they work together to bring the whole team together in the presence of simple practices, with enough feedback to enable the team to see where they are and to tune the practices to their unique situation.

Kent Beck is an expert in Extreme Programming. He has been a developer for 20 long, weary years during which time he has pioneered CRC cards, the HotDraw drawing editor framework, the xUnit family of testing frameworks, patterns for software development, and the rediscovery of test-first programming. He is always in demand as a speaker on software design and development issues.
